

FRISOMAT®

Innovators in steel buildings

FLATRO

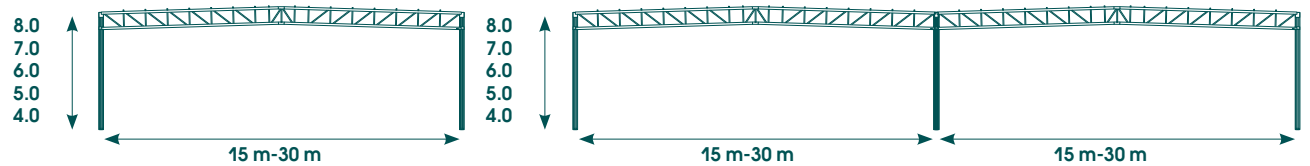

Dimensions

Flatro. A sustainable, cold rolled galvanised steel building with a flat roof.

Five-star choice:

- Spans from 15 to 30 m, sidewall heights 4, 5, 6, 7 and 8 m
- 100% galvanised High Strength Steel structure
- Roof pitch 1,72° (virtually flat)
- Typical truss beam framework
- Designed in accordance with client requirements

All dimensions can vary depending on local requirements and regulations.

FLATRO

elegant || STABILITY

Aesthetic design combined with an unseen strength.

Design for life

Looking for wide spans in a demanding climate? Need imperceptible integration in an industrial estate? Flatro offers the perfect solution. Double Σ -shaped profiles combined with a typical truss beam framework guarantee maximum strength and stability. All components of the completely galvanised, cold rolled structure are specially designed, developed and produced in-house assuring maximum quality. Built to last.

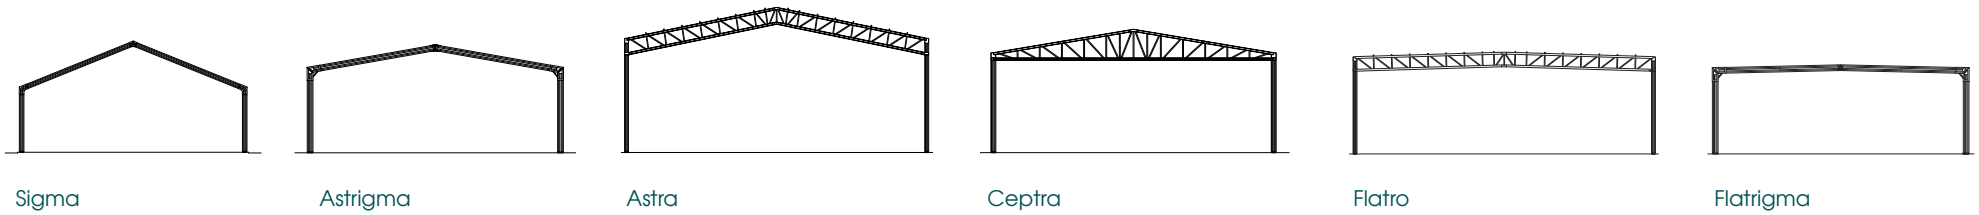

Maximum stability and strength combined with a relative low weight thanks to the unique Frisomat principle. The weight of the total structure is reduced by the use of galvanised, cold rolled materials and trussframe. The unique meccano-principle with prefabricated profiles assures flexibility and speed during development, production and construction yet leaving plenty of room for personalisation. Almost 100% recyclable, no need for heavy equipment during construction, an optimised use of precious material. A wise, efficient investment with a smaller environmental footprint. A comforting thought.

Applications

Wide free spans combined with large sidewall heights, Flatro offers comfort and peace of mind, all in compliance with local standards and regulations, no matter what application you need it for.

Showrooms, office space, production sites, secure storage or recreation facilities, Flatro is the perfect fit. If necessary, Flatro buildings can be equipped with different types of doors, smoke vents, window and loading bays, canopies, and various other options. We create your project.

Frisomat has a wide range of products, based on seven construction systems and more than 200 standardised buildings. The four superior systems are fully modular, guaranteeing customers complete freedom in construction and finishings.
